SUITEWORKS Tech

NetSuite Delivery Routing Solution

Deliver Faster, Smarter with NetSuite Delivery Routing by SuiteWorks Tech

Cut fuel costs, eliminate delivery delays & track every route — all within your NetSuite system.

SuiteWorks Tech's Delivery Routing Solution for NetSuite is a fully native SuiteApp that connects NetSuite with driver-friendly mobile delivery management. The SuiteApp automates route planning, delivery tracking, proof of delivery (POD) and real-time NetSuite route planning integration — ensuring every stop is tracked, every delivery verified, and every update flows back to NetSuite instantly. Designed for distributors, logistics providers and delivery businesses, it delivers real-time visibility into route performance & fleet efficiency.

Key Benefits

• **End-to-End Delivery Automation**
Manage route creation, dispatch, driver execution and POD capture entirely inside NetSuite — eliminating manual handoffs.

• **Smarter NetSuite Route Planning**
Generate optimized routes with ETAs for efficient truck routing and reduced planning effort.

• **Faster Deliveries, Lower Costs**
Reduce idle time and fuel consumption through optimized routing and live driver updates.

• **Real-Time Visibility for Managers**
Track delivery progress, GPS locations and exceptions from within NetSuite for immediate action.

• **Zero Third-Party Systems**
A 100% native NetSuite solution — no external platforms, no extra logins, no integration complexity.

Why NetSuite Delivery Routing?

SuiteWorks Tech's Delivery Routin SuiteApp transforms NetSuite into a complete delivery execution platform. By synchronizing route planning, driver mobile execution and proof-of-delivery data, businesses gain faster deliveries, fewer errors and a single source of truth for logistics — all natively within NetSuite.

Key Features

Seamless Driver Assignment & Route Dispatch
Create and assign routes directly in NetSuite; routes, stops and customer details push automatically to drivers' mobile apps.

Mobile App for Drivers
Drivers view daily routes, navigate, capture signatures/photos, record delivery outcomes & submit completed routes from a simple mobile interface.

Proof of Delivery (POD) Capture
Capture digital signatures, photos and timestamps at delivery — all POD data syncs back to NetSuite for verification and compliance.

Failed Delivery & Exception Handling
Record failed deliveries with reasons and supporting images; exceptions are tracked in NetSuite for follow-up.

Automatic NetSuite Route Status Updates
Delivery outcomes, timestamps & statuses update Sales Orders, Item Fulfillments & Route records automatically when routes are completed.

Real-Time NetSuite Route Planning Integration
Dispatchers monitor route progress and delivery status in real time from within the NetSuite interface.

Google Maps Integration for Navigation
Each stop links to Google Maps for one-tap navigation, improving driver routing and delivery accuracy.

Route Completion Reports in NetSuite
Run route completion and performance reports by driver, route or date to analyze delivery success and identify bottlenecks.

Connected & Mobile — NetSuite Delivery Routing App

The NetSuite Delivery Routing Mobile App (Android & iOS) empowers drivers to manage their delivery day — view stops, navigate, mark Delivered or Failed, capture POD, and upload photos. Every action syncs to NetSuite in real time. The app does not require additional NetSuite user licenses.

100% Native NetSuite SuiteApp — No External Systems Needed

Built entirely on NetSuite, the Delivery Routing SuiteApp eliminates third-party route tools and middleware. All delivery, GPS and POD data remains synchronized within your NetSuite ERP for accurate, auditable logistics records.
